Administrivia

Deployment common issue

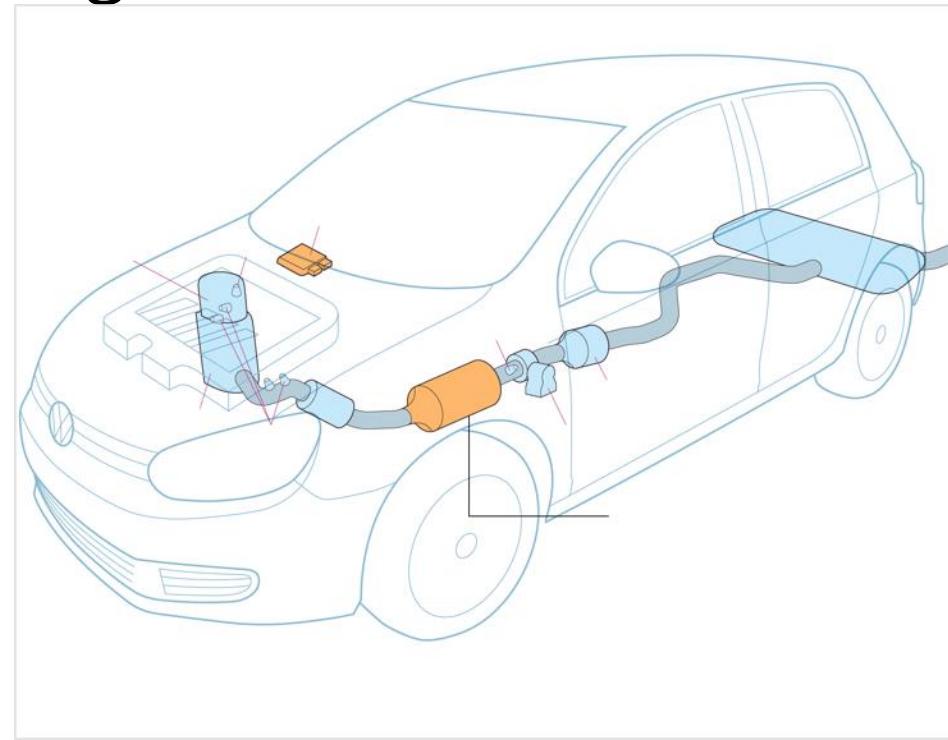

You might need to edit “.github/workflows/azure-deploy-f24.yml”

- Line 22: github.repository should match GitHub repo “cmu-313/team-repo-name”
- **Line 33: should say node-version: '20.17.0'**
 - **It might say node-version: '20.x'**
- Line 37: url should be changed to Default Domain name of the Web App keeping the same port (443)
- Line 51: app-name: “<name>” where <name>.azurewebsites.net is the host name
- Line 53: needs to be updated with your new publish profile secret key from Github

Volkswagen Scandal

VW was caught cheating on emissions for Diesel engines

<https://www.nytimes.com/interactive/2015/business/international/vw-diesel-emissions-scandal-explained.html?mtrref=www.google.com&assetType=REGIWALL>

What is Human Flourishing?

According to Harvard's Human flourishing program: Human flourishing is composed of five central domains: **happiness and life satisfaction, mental and physical health, meaning and purpose, character and virtue, and close social relationships.**

Why Human Flourishing?

- Universal Declaration of Human Rights: “All human beings are born free and equal in dignity and rights.”
- Declaration of Independence: “We hold these truths to be self-evident...”
- Internal Compass
- Faith

to fool AI with magic

Code of Ethics

As an ACM member I will

- Contribute to society and human well-being.
- Avoid harm to others.
- Be honest and trustworthy.
- Be fair and take action not to discriminate.
- Honor property rights including copyrights and patent.
- Give proper credit for intellectual property.
- Respect the privacy of others.
- Honor confidentiality.

Code of Ethics

Research shows that the code of ethics does not appear to affect the decisions made by software developers.

Does ACM's Code of Ethics Change Ethical Decision Making in Software Development?

Andrew McNamara

jssmit11@ncsu.edu

Emerson Murphy-Hill

North Carolina State University
Raleigh, North Carolina, USA
emerson@csc.ncsu.edu

ABSTRACT

Ethical decisions in software development can substantially impact end-users, organizations, and our environment, as is evidenced by recent ethics scandals in the news. Organizations, like the ACM, publish codes of ethics to guide software-related ethical decisions. In fact, the ACM has recently demonstrated renewed interest in its code of ethics and made updates for the first time since 1992. To better understand how the ACM code of ethics changes software-

The first example is the Uber versus Waymo dispute [26], in which a software engineer at Waymo took self-driving car code to his home. Shortly thereafter, the engineer left Waymo to work for a competing company with a self-driving car business, Uber. When Waymo realized that their own code had been taken by their former employee, Waymo sued Uber. Even though the code was not apparently used for Uber's competitive advantage, the two companies settled the lawsuit for \$245 million dollars.

Challenge:

How do we apply ethics to a field (Software Engineering) that changes so often?

Remember the Dominos case? The ADA law was written before the first website (1990)

To handle this uncertainty about the future, let's focus on three questions we can ask to remind ourselves to focus on promoting human flourishing.

Three questions to promote human flourishing

1. Does my software respect the humanity of the users?
2. Does my software amplify positive behavior, or negative behavior for users and society at large?
3. Will my software's quality impact the humanity of others?

1. Does my software respect
the humanity of the users?

Humane Design Guide

<http://humanetech.com>

Humane Design Guide (Alpha Version)

Use this worksheet to identify opportunities for Humane Technology.			What are Human Sensitivities?	
Human Sensitivity	We are inhibited when	What inhibits	We are supported when	Opportunity to improve
Emotional What we feel in our body and in our physical health.	We are stressed, low on sleep, afraid or emotionally exhausted.	<ul style="list-style-type: none">Artificial scarcityUrgency signallingConstant monitoringOptimizing for screen time	Design engenders calm, balance, safety, pauses and supports circadian rhythms.	<input type="radio"/> High <input type="radio"/> Low
Attention How and where we focus our attention.	Attention is physiologically drawn, overwhelmed or fragmented.	<ul style="list-style-type: none">Constant context switchingMany undifferentiated choicesFearful informationNo stopping cues (e.g. infinite scroll)Unnecessary movement	Enabled to bring more focus and mindfulness.	<input type="radio"/> <input type="radio"/>
Sensemaking How we integrate what we sense with what we know.	Information is fear-based, out of context, confusing, or manipulative.	<ul style="list-style-type: none">Facts out of contextOver-personalized filtersEquating virality with credibilityDeceptive authority (ads vs. content)	Enabled to consider, learn, express and feel grounded.	<input type="radio"/> <input type="radio"/>
Decisionmaking How we align our actions with our intentions.	Intentions and agency are not solicited nor supported.	<ul style="list-style-type: none">Avatars to convey authorityStalking ads and messagesPush content modelsServing preference over intent	Enabled to gain agency, purpose, and mobilization of intent.	<input type="radio"/> <input type="radio"/>
Social Reasoning How we understand and navigate our personal relationships.	Status, relationships or self-image are manipulated.	<ul style="list-style-type: none">Quantified social statusViral sharingImplied obligationEnabling impersonation	Enabled to connect more safely and authentically with others.	<input type="radio"/> <input type="radio"/>
Group Dynamics How we navigate larger groups, status, and shared understanding.	Excluded, divided or mobilized through fear.	<ul style="list-style-type: none">Suppressing views and nuanceEnabling ad hominem or hate speechEnabling viral outrageLack of agreed-upon norms	Enabled to develop a sense of belonging and cooperation.	<input type="radio"/> <input type="radio"/>

[Center for Humane Technology] www.humanetech.com

Now rank the sensitivities 1-6 based on what you now see as the largest opportunities for Humane Design. Then use the second sheet to develop an action statement. ↑

Humane Design Guide

<http://humanetech.com>

Provides a template for considering a piece of software, and asking questions to help us arrive at a “humane design”

Consider 6 human sensitivities: Emotional, Attention, Sense making, Decision making, Social Reasoning, and Group Dynamics

Human Sensitivity	We are inhibited when	What inhibits	We are supported when	Opportunity to improve
Attention How and where we focus our attention.	Attention is physiologically drawn, overwhelmed or fragmented.	<ul style="list-style-type: none">• Constant context switching• Many undifferentiated choices• Fearful information• No stopping cues (e.g. infinite scroll)• Unnecessary movement	Enabled to bring more focus and mindfulness.	

Identify Opportunities to improve

Humane Design Guide

<http://humanetech.com>

After analysis step, develop plan of action:

1. In what ways does your product/feature currently engage Human Sensitivities?
2. How might your product/feature support or elevate human sensitivities?
3. Action Statement

GenderMag

<https://gendermag.org>

Abby Jones¹

You can edit anything in blue print

- 28 years old
- Employed as an Accountant
- Lives in Cardiff, Wales

Abby has always liked music. When she is on her way to work in the morning, she listens to music that spans a wide variety of styles. But when she arrives at work, she turns it off, and begins her day by scanning all her emails first to get an overall picture before answering any of them. (This extra pass takes time but seems worth it.) Some nights she exercises or stretches, and sometimes she likes to play computer puzzle games like Sudoku

Background and skills

Abby works as an accountant. She is comfortable with the technologies she uses regularly, but she just moved to this employer 1 week ago, and their software systems are new to her.

Abby says she's a "numbers person", but she has never taken any computer programming or IT systems classes. She likes Math and knows how to think with numbers. She writes and edits spreadsheet formulas in her work.

In her free time, she also enjoys working with numbers and logic. She especially likes working out puzzles and puzzle games, either on paper or on the computer

Motivations and Attitudes

- **Motivations:** Abby uses technologies to accomplish her tasks. She learns new technologies if and when she needs to, but prefers to use methods she is already familiar and comfortable with, to keep her focus on the tasks she cares about.

- **Computer Self-Efficacy:** Abby has low confidence about doing unfamiliar computing tasks. If problems arise with her technology, she often blames herself for these problems. This affects whether and how she will persevere with a task if technology problems have arisen.

- **Attitude toward Risk:** Abby's life is a little complicated and she rarely has spare time. So she is risk averse about using unfamiliar technologies that might need her to spend extra time on them, even if the new features might be relevant. She instead performs tasks using familiar features, because they're more predictable about what she will get from them and how much time they will take.

How Abby Works with Information and Learns:

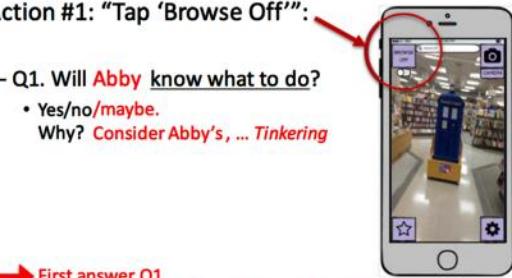

- **Information Processing Style:** Abby tends towards a comprehensive information processing style when she needs to move information. So, instead of acting upon the first option that seems promising, she gathers information comprehensively to try to form a complete understanding of the problem before trying to solve it. Thus, her style is "burst-y"; first she reads a lot, then she acts on it in a batch of activity.

- **Learning: by Process vs. by Tinkering:** When learning new technology, Abby leans toward process-oriented learning, e.g., tutorials, step-by-step processes, wizards, online how-to videos, etc. She doesn't particularly like learning by tinkering with software (i.e., just trying out new features or commands to see what they do), but when she does tinker, it has positive effects on her understanding of the software.

¹Abby represents users with motivations/attitudes and information/learning styles similar to hers. For data on females and males similar to and different from Abby, see <http://eusesconsortium.org/gender/gender.php>

GenderMag

<https://gendermag.org>

<ul style="list-style-type: none">• 1. Pick a persona. eg: Abby• 2. Pick a use case/scenario in your tool, eg:<ul style="list-style-type: none">– in Book Store Navigator app...– “Find science fiction books”  	<ul style="list-style-type: none">• 3a-b. Pick a Subgoal for that scenario. eg: <p>Subgoal #1: “See bookstore map”.</p> <p>Q: Will Abby have formed this sub-goal...?<ul style="list-style-type: none">• Yes/no/maybe.Why? Consider Abby's Motivations...</p>  
<ul style="list-style-type: none">• 3c-d. Pick an Action for that subgoal. <p>Action #1: “Tap ‘Browse Off’”:</p> <p>– Q1. Will Abby know what to do?<ul style="list-style-type: none">• Yes/no/maybe.Why? Consider Abby's ... Tinkering</p>  <p>First answer Q1. After answering it, then perform the action.</p>	<p>– 3e. Q2. If she performs the action, producing</p>  <p>will Abby see progress toward the subgoal?<ul style="list-style-type: none">• Yes/no/maybe. Why? Consider Abby's Self-Efficacy & ...</p>

User Centered Design

User-centered design tries to optimize the product around how users can, want, or need to use the product, rather than forcing the users to change their behavior to accommodate the product.

-Wikipedia

Agile

2. Does my software amplify positive or negative behavior for users and society at large?

Subject: Another request for Darwin Fish

Organization: University of New Mexico, Albuquerque

Lines: 11

NNTP-Posting-Host: triton.unm.edu

Hello Gang,

There have been some notes recently asking where to obtain the DARWIN fish.

This is the same question I have and I have not seen an answer on the net. If anyone has a contact please post on the net or email me.

Explain “why” to customers

There may be other reasons you're seeing this ad, including that Rivendale Farms wants to reach **people ages 22 to 64 who live or were recently near Pittsburgh, Pennsylvania**. This is information based on your Facebook profile and where you've connected to the internet.

@dovneon

What Instagram removing likes may mean for influencers and our self-esteem

SCIENCE & TECH - FEATURE

The decision could have a positive impact on the way people use the platform, but harm those trying to use it professionally

Anil Dash on how to prevent abuse

http://anildash.com/2011/07/20/if_your_websites_full_of_assholes_its_your_fault-2/

You should have real humans dedicated to monitoring and responding to your community.

You should have community policies about what is and isn't acceptable behavior.

Your site should have accountable identities.

You should have the technology to easily identify and stop bad behaviors.

You should make a budget that supports having a good community, or you should find another line of work.

An ethics checklist for data scientists

`deon` is a command line tool that allows you to easily add an ethics checklist to your data science projects. We support creating a new, standalone checklist file or appending a checklist to an existing analysis in [many common formats](#).

δέον • (déon) [n.] (Ancient Greek) [wikitionary](#)

| Duty; that which is binding, needful, right, proper.

AI Incident Database

The screenshot shows a web browser window for the AI Incident Database (AIID) at incidentdatabase.ai. The page has a dark blue header with the AIID logo and navigation links for 'Discover' and 'Submit'. The main content area features a 'Welcome to the AIID' section with a large heading and a 'Why "AI Incidents"' section with explanatory text. A sidebar on the right lists 'CONTENTS' including 'Why "AI Incidents"?' and 'What is an Incident?'. The footer contains a link to 'Partnership on AI Home'.

Welcome to the AIID

Why "AI Incidents"?

Intelligent systems are currently prone to unforeseen and often dangerous failures when they are deployed to the real world. Much like the transportation sector before it (e.g., [FAA](#) and [FARS](#)) and more recently [computer systems](#), intelligent systems require a repository of problems experienced in the real world so that future researchers and developers may mitigate or avoid repeated bad outcomes.

What is an Incident?

The initial set of more than 1,000 incident reports have been intentionally broad in nature. Current examples include,

3. Will my software's quality
impact the humanity of
others?

Quality has long been considered

Quality attributes [edit]

Notable quality attributes include:

- accessibility
- accountability
- accuracy
- adaptability
- administrability
- affordability
- agility [Toll] (see Common Subsets below)
- auditability
- autonomy [Erl]
- availability
- compatibility
- composable [Erl]
- configurability
- correctness
- credibility
- customizability
- debugability
- degradability
- determinability
- demonstrability
- dependability
- deployability
- discoverability [Erl]
- distributability
- durability
- effectiveness
- efficiency
- evolvability
- extensibility
- failure transparency
- fault-tolerance
- fidelity
- flexibility
- inspectability
- installability
- integrity
- interchangeability
- interoperability [Erl]
- learnability
- localizability
- maintainability
- manageable
- mobility
- modifiability
- modularity
- observability
- operability
- orthogonality
- portability
- precision
- predictability
- process capabilities
- producibility
- provability
- recoverability
- relevance
- reliability
- repeatability
- reproducibility
- resilience
- responsiveness
- reusability [Erl]
- robustness
- safety
- scalability
- seamlessness
- self-sustainability
- serviceability (a.k.a. supportability)
- securability
- simplicity
- stability
- standards compliance
- survivability
- sustainability
- tailorability
- testability
- timeliness
- traceability
- transparency
- ubiquity
- understandability
- upgradability
- vulnerability
- usability

Engineering ethics.

Ethics applies and is formalized in many professional fields: medical, legal, business, and engineering.

The first codes of engineering ethics were formally adopted by American engineering societies in 1912-1914. In 1946 the National Society of Professional Engineers (NSPE) adopted their first formal Canons of Ethics.

“hold paramount safety, health and welfare of the public”

Citigroup Center, Designed by Structural engineer William LeMessurier

Followed calculations required by building codes

Civil Engineering student Diane Hartley realized there was a problem

Tests showed that winds needed to bring it down would happen every 55 years

Professional Ethics

Professional ethics encompass the personal, and corporate standards of behavior expected by professionals.

First three “professions”

- Divinity,

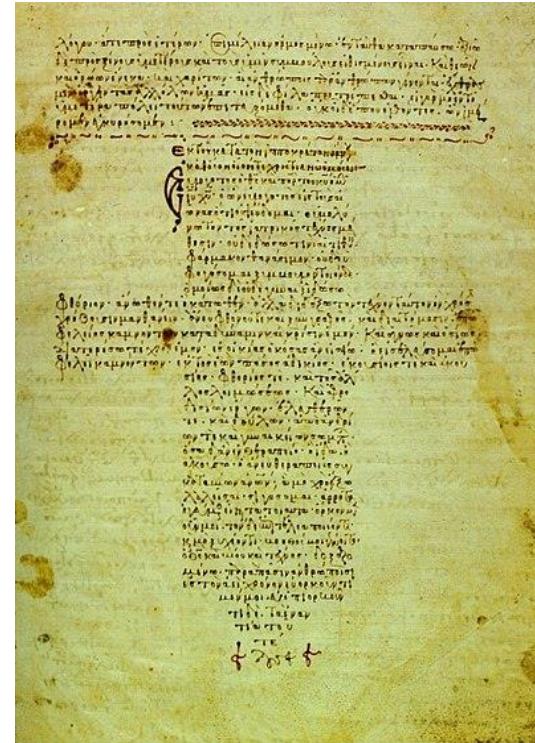

- Law

- Medicine

Medicine - Intrinsic

Hippocratic Oath ~450BC “Do no Harm”

Law -Extrinsic

Bar regulates behavior

Oath to follow rules

Malpractice

Legal Malpractice

Not every mistake is legal malpractice. For malpractice to exist:

Attorney must handle a case inappropriately due to negligence or with intent to harm
And cause damages to a client

Malpractice vs. Negligence

Negligent
prudent

Malpractice
"professional
professionals
provided
body
plaintiffs

DISCUSSION: What should we do going forward?

Bioengineering Ethics:

- Respect for Autonomy
- Beneficence
- Nonmaleficence
- Justice

Professional Engineers

What {is / could be} the role of **professional engineers** in software?

By ----PCStuff 03:47, 31 July 2006 (UTC), CC BY-SA 2.5,
<https://commons.wikimedia.org/w/index.php?curid=10340855>

Different scope of concerns addressed differently

Will software quality impact human flourishing?

Most traditional emphasis of “engineering ethics”

What can we learn from other professions?

Should software have “Professional Engineers”?

How do we define “safety critical systems”?

How much testing is enough? How can we convince others to do that much testing?

These questions are the start of the conversation, but as technology evolves, we must be vigilant to ensure we are promoting human flourishing

Three questions to promote human flourishing

1. Does my software respect the humanity of the users?
2. Does my software amplify positive behavior, or negative behavior for users and society at large?
3. Will my software's quality impact the humanity of others?
