Project 3 Workbook

Name:

Andrew ID:

Team:

How to use this workbook

1. Make a copy of this template (File → Make a copy) in your team's Drive folder, named **P3 Workbook – <andrewid>**.
2. Do all of your Project 3 work here. Replace the gray instructions and placeholder text with your own.
3. Keep each section on its own page. Don't delete the page breaks.
4. When you're done: File → Download → PDF, upload it to the **Project 3: Elicit** assignment on Gradescope, and tag each question to its section's pages.
5. Answer the reflection questions separately in the **Project 3: Reflection** assignment on Gradescope.

1. Target Declaration

Fill in each item below. See "Choosing a Target Feature" in the handout.

Feature:

Files or modules that implement it (link each one in your team repository):

Why I chose it:

Did I switch away from my Project 2 feature? Yes / No. **If yes, what made it a poor fit:**

2. Interview Script

About one page. Include at least one question of each kind below, adapted to your feature, and plan a follow-up for each in case the answer is vague.

Warm-up

Q:

Invariants

What should never happen?

Q:

Follow-up:

Round-trip

If you do X and then undo it, what do you expect to see?

Q:

Follow-up:

Metamorphic

If the input changed slightly, what should stay the same? What should change?

Q:

Follow-up:

Oracle

How would you know it gave the wrong answer?

Q:

Follow-up:

3. Interview Log

One row per interview. For the outside interviewee, give a role only (e.g. "backend developer, uses Copilot daily"), not a name.

Kind	Interviewee (name or role)	Date	Duration	In person or remote
Classmate (not on my team)				
Course staff				
Outside the course (uses an AI coding tool)				

4. Classmate Interview Notes

Record what the interviewee said, as close to their words as you can. Number every line C-1, C-2, and so on, so your requirements can cite them. Mark which script question you asked, and note any follow-ups you added on the spot.

C-1:

C-2:

C-3:

5. Staff Interview Notes

Same format as section 4. Number every line S-1, S-2, and so on.

S-1:

S-2:

S-3:

6. Outside Interview Notes

Same format as section 4. Number every line O-1, O-2, and so on.

O-1:

O-2:

O-3:

7. Requirements

5 to 8 new or already-implemented requirements. Each must be testable and cite the interview notes it came from. Acceptance criteria give a concrete situation and the expected outcome. Replace the example row with your own; add rows up to R8. Don't merge cells.

ID	Interview evidence	Requirement	Acceptance criteria
R1 (example)	C-12, S-4: "I'd be furious if it ran rm -rf after I said deny"	When a command matches several rules, the last matching rule in the config decides the outcome.	With rules {"*": "allow", "rm *": "deny"}, rm -rf / evaluates to deny and ls -la evaluates to allow.

R4			
R5			

8. Collaboration Disclosure

If you shared a target feature with classmates, list who you worked with and which parts were shared (script, interviews). Otherwise write "None".
